

BI-FOLD DOORS

Bi-fold doors are growing in popularity due to the openings they create and their versatility. They present a professional feature in the design of high-end residential and commercial developments. Triline's interior bi-fold doors allow you to create clear openings between rooms which will transform your living spaces. These features make them a fantastic alternative to regular hinged doors. By the ability to close off an intimate area in a large space, they create a warm cozy environment. Triline bi-folds are also a great solution for wardrobe doors, allowing you to view everything at a glance!

The bi-fold door is suitable for residential and light commercial internal partitions, with all leaves of equal width. Triline bi-fold hardware enables end folding interior doors to be designed using standard width leaves without the need to cut down the leaves adjacent to the jambs.

Any number of folding units can be used, allowing you to cover any width of opening. The leaves can fold to one or both sides of the opening.

Triline bi-fold units of up to six leaves can be pivoted to each side of the opening. End folding floating units consist of four or six leaves. Door leaves are constructed to provide secure fitting for the pivot sets, hangers, hinges and guides.

Larger units of three or more leaves to one side will require a floor mounted guide track for stability when closed.

Max Leaf Weight: 25kg

Recommended Max Leaf Height: 2400mm

Recommended Max Leaf Width: 900mm

Leaf Thickness: 35—50mm

Application: Residential, Light Commercial

N.B. Max door height and width may vary depending on the weight of the door.
