

Auto Cav Touchless Switch

90 09M Touchless Switch

The unique low-profile 90 09M touchless switch is a contactless actuator utilising capacitive proximity technology. Upon activation, the aesthetically pleasing backlight design will change colour from white to green with an optional audible beep. The touchless switch is also supported by a mechanical override function in the event of power or electronic failure.

The 90 09M also offers a selectable open time between 1~15 seconds and a typical detection zone setting of 25~50mm for different installation environments to reduce unwanted activations.

Key Features

- Hands free – reduces the spread of germs and bacteria
- Selectable unlock time (1~15 seconds)
- Variable voltage 12~24VDC
- Visible colour change and audible beep (optional) when activated
- Mechanical press button override in event of power failure
- Optional EXIT or HAND wave gesture
- Mounts on single gang electrical box
